Notes before installing

- The mod is based on the Steam(English) version of the game. The mod replaces the file responsible for all in-game events. It will likely break and not work properly if replacing a file from a different version.

Installation

Inside the Scripts folder you'll find an "EdiConfig.json" file and a "Gallery" folder containing the scripts next to it. Please download Edi from the link above and use the "Add Game" button to select the included "Edi-Config.json". Then make sure the game is active in the drop-down next to it.

Inside the included “Dragon Princess is Hungry” folder, copy the “Mod Files” folder to where the game is installed. It should look like this:
